

What frameworks have had strong influences on this STS formation?

Dominique Vinck: Our project saw itself as a research programme aimed at contributing to multidimensional understanding of the dynamics linked to knowledge... [W]e point out that the understanding of the production, statement, circulation and mobilization of knowledge is very far from being exhausted. We suggest the anthropology must aim to take also account of the forms of knowledge of less visible actors, on the margins of the great challenges of modernity or so deeply attached to the devices used to process this knowledge that they become its silent servants. An anthropology that must remain attentive to the study of scientific activities, their organization, or their style of thinking when they envisage particular or common futures; and also attentive to the proliferation of disciplines and research fields. An anthropology that must not falter in the understanding of the engineering knowledge and techniques that set it among increasingly specific technologies and which must take up the challenge of understanding the technoscientific enterprise that has so far remained very focused on the societies of the North, while the geography of the sciences and technologies is being transformed. Finally, an anthropology that cannot ignore the digital... A form of geopolitics of knowledge capacities is now at work, flowing through channels and modes of circulation of people, knowledge and techniques whose economic, political and social motors radically question the centres of power and their specific infrastructures.

Anthropology of Knowledge STS Publications

Khandekar, Aalok, Duygu Kaşdoğan, Alberto Morales Ramirez, Noela Invernizzi, and Martín Pérez Comisso. 2018. "Anthropology of Knowledge." In STS Publications, created by Aalok Khandekar, Duygu Kaşdoğan, Alberto Morales Ramirez, Noela Invernizzi, and Martín Pérez Comisso. In STS Across Borders Gallery Exhibit, curated by Aalok Khandekar And Kim Fortun. Annual Meeting of the Society Of Social Studies of Science. Sydney, Australia, Aug 30-31. <http://www.stsinfrastructures.org>.
